

Tomahawk™ 404 High Tillage Subsoil Plow

The New Tomahawk™ 404, provides extremely high quality tillage on lower horsepower tractors, shown on a D6N. The 4-32" or 36" Disks spaced 9" apart to cut a highly tilled, compact 5.2ft bed over the sub-soil zone.

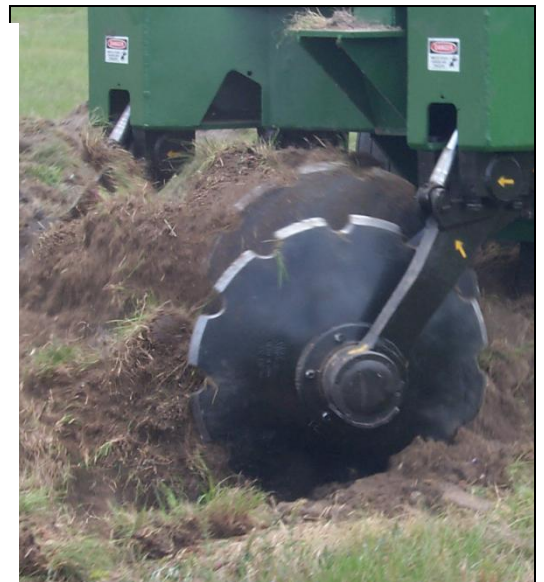

◆ The Heavy Duty Lift System articulates and lift with a large single pivot point for great durability and locks in the up position for safety.

◆ Tomahawk™ jump arm and disk configuration designed to provide high tillage. Disks are set with less pitch allowing closer spacing, less drag and greater cutting action.

◆ With less aggressive disks fine tillage is achieved and provides a dense soil structure free of dirt clods and air pockets without an additional packer or chopper roller.

◆ Each jump arm provides 36 inch of clearance under the disk for greater stump clearance and less wear on spindle and disk assemblies.

◆ Combines 4 disks with coulter and ripper to provide fully tilled bed with a center subsoil depth as deep as 24 inches or as shallow as 12 inches

Specifications:

- ◆ 4-disks, 32" or 36" options available, 9" disk spacing, cuts 5.2ft bed.
- ◆ New "High Lift" jump height (36" total clearance).
- ◆ 2 x 11" Swept-back subsoil shank adjustable from 12 to 24" deep with replaceable ripper point and choice of 10", 12" or 14" subsoil wing.
- ◆ Two 5" x 24" lift cylinders with 2.5" shafts.
- ◆ Heavy duty 48" coulter clears ripper path through heavy root mat and stump
- ◆ 2.5 gallon accumulator connected to the Stump-Jump™ hydraulic relief system and lift system.
- ◆ Lift configuration vary for Skidder or Trailing plow applications.
- ◆ Optional 26" Packer or Chopper Roller

DIMENSIONS

Length: 10.5ft (3.2m)
Width: 7.2ft (2.2m)
Cut: 60in (1.5m)
Weight: 8,900 lbs
(4,075kg)
